Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

DETAILED ACTION

Response to Arguments

1. Applicant's arguments have been considered but do not place the application in condition for allowance.
2. The indicated allowability of claims 13-28 is withdrawn in view of the new ground of rejection. Rejections based on the Khosravi and Broome et al. reference(s) follow.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 35 and 37 are rejected under 35 U.S.C. 102(e) as being anticipated by Broome et al. (6,152,946).

Applicants argue that Broom et al. do not disclose "a proximal region having an area with an increased coefficient of friction for interface with a retrieval device." Examiner disagrees. Broome et al. disclose a device comprising a filter cartridge having a frame portion and a filter portion and a proximal region (figs. 11-16) having ridges (132, 136). Note: The introductory statement of intended use and all other functional statements have been carefully considered but are deemed not to impose

Art Unit: 3731

any structural limitations on the claims distinguishable over the Broome et al.'s device which is capable of being used as claimed if one desires to do so.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 13-29, 31-42 are rejected under 35 U.S.C. 103(a) as being unpatentable over Khosravi (6,361,546) in view of Broome et al. (6,152,946). Khosravi discloses all the limitations of the claims except for the presence of ridges or enlarged portions at the proximal end of a proximal region of the filter cartridge to prevent the cartridge moving distally beyond a cuff. Broome et al. disclose a filter cartridge having a proximal region with ridges (132, 136) for preventing the cartridge moving distally beyond a cuff (126). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to employ enlarged portions or ridges at the proximal end of Khosravi's filter cartridge in order to prevent the cartridge moving distally beyond the cuff.
